

MC 270 Electric Burden Carrier

The MC-270 is the industry's smallest electric burden carrier. Its narrow, highly maneuverable design can fit through most standard door openings, and will bring you and materials closer to workstations.

This low-profile, multi-purpose electric burden carrier boasts a long deck for more cargo space, all-steel unibody construction and hefty 14" plate steel front cowl. Its low-step entry reduces operator fatigue; its dual self-adjusting drum brakes ensure safe braking performance.

Vehicle Specification

Motor	10 hp
Voltage	36v
Transmission	Dual V-Belt Drive
Batteries	6x6v
Steering	Automotive Style
Seating	1 Bucket Seat
Height	96 cm
Length	211cm
Width	76 cm
